"Learning does not result from passively sitting in the presence of a teacher who's talking. The student must listen, write, question, discuss, imagine, experiment, construct."

What you **MUST** do in order to have a chance to do well (C or better) in Organic Chemistry.

1. Read the chapter **before** it is discussed in class.
2. Recopy your notes - **critically!** Use the left hand side of your notebook to take notes in class and the right hand side for recopying.
3. Do the problems in the book - and **understand** the solutions. Memorizing the answers to problems will not help you.
4. Participate in class. Ask questions! (see quote above)
